

HOOK AND LOOP (VELCRO) INSTALLATION

1. Place the mattress with the head end toward the head end of the adjustable base. The head of the mattress has the small "law labels" sewn in.
2. Turn the mattress over, keeping the head at the same end.
3. Peel the release paper from the Velcro strip to expose the adhesive on each side.
4. Place the Velcro strips according to the above drawing.
Flip the mattress back so it is right side up, keeping the head of the bed aligned with the base. The mattress will not slide because of the adhesive. To move the mattress for aligning the edges with the base, lift the mattress slightly.
5. Lie down on the mattress and roll around some to press the adhesive on the Velcro strips to the mattress and base.
6. Repeat for the other mattress if there are two.
